

Ice River Sustainable Solutions / Blue Mountain Plastics Recycling

At BMP Recycling (Blue Mountain Plastics Recycling), we buy PET (Polyethylene Terephthalate) plastic bales from municipal recycling facilities across Canada and the Northern US. We process and sort the materials into different colours of plastic, removing any foreign content. Our facility recycles 55 million pounds of PET plastic per year; mostly coming from Ontario's blue box program. We produce clear and blue plastic flake that will be used in our 100% recycled water bottles.

Thermoform clam shell packaging is a type of food grade pre-formed plastic tray that normally can't be recycled. We convinced Materials Recovery Facilities it could be included in our PET bales so that it gets recycled into our 100% recycled water bottles. This saves millions more pounds of plastic from going to landfills each year.

Recycled PET plastic has the lowest carbon footprint vs. other materials like cartons, glass or aluminum and is by far the safest and most recyclable material available for food and beverage packaging. We make our rPET resin entirely out of 100% recycled plastic. And we do it in a closed loop where the resin we sell is made into sustainable packaging that's recycled and returned to us to be turned into resin – over and over again.
